SUMMARY

Engineer with 3+ years building production software alongside partners and clients in fintech. Technical lead for Invent.us's third-party vendor program, taking 20+ partner apps from first scoping call to production. Builds full-stack integrations (React, Node, OAuth, and enterprise APIs) and applied AI tooling, including Claude Code skills that cut vendor setup from about 1 hour to under 10 minutes.

WORK EXPERIENCE

Technical Lead, Vendor Integrations, Invent.us May 2025 – Present

- Sole technical point of contact for every third-party vendor; final approver on 20+ Invent Store apps
- Guide vendor teams from introduction to production: provision credentials, seeded portals, and GitLab access; scope builds against platform capabilities; support API integration and third-party OAuth configuration; review merge requests and deploy to demo environments
- Built Claude Code skills that replace manual vendor project setup (template pull, install wizard, project creation and push) with a single prompt, cutting setup from about 1 hour to under 10 minutes; also automated widget updates and preview-image generation
- Built an AI code-review skill (merge-request and whole-app modes) that sorts findings by severity; piloted the skills with a non-technical user and hardened templates, guardrails, and review checks based on the results
- Co-built and maintain the Invent SDK used by all vendors (app template, UI-kit components, API and SDK docs), and migrated legacy vendor apps to the new UI framework, porting about 10 myself
- Built full-stack widgets integrating Google, Microsoft Entra, and HubSpot APIs via OAuth, and converted a CEO-built Claude prototype into a production micro-app on the Invent SDK

Software Engineer, Invent.us November 2024 – May 2025

- Ran recurring technical demos for an $8B AUM client and led the full-stack build of their HubSpot ticket portal, surfacing real-time tickets, comments, attachments, and tasks
- Onboarded 12+ external developers onto the Invent platform through technical walkthroughs covering SDK integration, API usage, and multi-tenant portal architecture
- Served as primary technical escalation point for 20+ integration partners, resolving 100+ developer tickets spanning SDK bugs, API configuration, and platform integration issues

Frontend Development Intern, Invent.us August 2024 – November 2024

- Shipped a production React frontend for client portals featuring advanced form validation, Azure file uploads, and centralized state management
- Hired full-time within 90 days

Full-Stack Software Developer, University of Washington Finance April 2023 – April 2024

- Designed and built a full-stack feature (SQL stored procedures, backend, and frontend UI) for an internal platform managing $60M+ in annual scholarship funding
- Built a UI that lets non-technical staff self-resolve Workday data mismatches, cutting resolution time by 90%
- Raised automated test coverage from 32% to 86% on a platform handling critical financial data

EDUCATION

University of Washington, Seattle | BA, Psychology, 2022

App Academy Full-Stack Software Engineering Bootcamp April 2022 – October 2022

SKILLS

Languages: TypeScript, JavaScript, C#, Python, SQL (PostgreSQL)
Frontend: React, Redux, Storybook, Tailwind
Backend & APIs: Node.js, Express.js, ASP.NET Core; OAuth integrations (Google, Microsoft Entra, HubSpot)
Tools: Claude Code (skills authoring), Git, GitLab, Azure, Jira, Postman, Figma
Architecture: Federated micro-frontends, multi-tenancy, SDK & UI-kit development
Client-Facing: Vendor onboarding, requirements scoping, technical discovery, technical demos
