SUMMARY

Engineer with 2+ years building and supporting developer-facing products in financial environments. Combines full-stack technical depth with hands-on partner experience — onboarding integration partners, authoring SDK documentation, and managing executive relationships. Leverages AI-assisted development to ship faster and maintain code quality.

WORK EXPERIENCE

Software Engineer, Invent.us

November 2024 – Present

- Onboarded 12+ external developers onto the Invent platform, leading end-to-end technical walkthroughs covering SDK integration, API usage, and multi-tenant portal architecture
- Supported 20+ integration partners as primary technical escalation point, resolving 100+ developer tickets spanning SDK bugs, API configuration, and platform integration issues
- Reviewed and approved 20+ third-party vendor applications to production, serving as final authority on security, performance, and code quality standards before Invent Store publication
- Debugged and contributed fixes directly to the SDK codebase while authoring technical documentation for the API and SDK, reducing onboarding friction for external developers
- Led the full-stack implementation of a custom HubSpot ticket portal for an \$8B AUM client — surfacing real-time ticket data, comments, attachments, and tasks via the HubSpot API — while managing bi-weekly C-suite briefings.

Frontend Development Intern, Invent.us

August 2024 – November 2024

- Shipped a production React frontend for client portals featuring advanced form validation, Azure file uploads, and centralized state management
- Promoted to full-time engineer within 90 days based on technical output and expanded scope of contributions

Full-Stack Software Developer, University of Washington Finance

April 2023 – April 2024

- Independently architected and delivered a full-stack feature end-to-end — including SQL stored procedures, backend logic, and frontend UI — for an internal platform managing \$60M+ in annual scholarship funding
- Designed and built a custom UI enabling non-technical staff to self-resolve Workday data mismatches, reducing resolution time by 90%
- Expanded automated test coverage from 32% to 86%, ensuring integrity of critical financial data across the platform

EDUCATION

App Academy Full-Stack Software Engineering Bootcamp

April 2022 - October 2022

The University of Washington, Seattle | BA in Psychology

Class of 2022

TECHNICAL SKILLS

Frontend: React, TypeScript, Redux, Storybook, HTML, CSS, Tailwind

Backend & APIs: Node.js, Express.js, ASP.NET Core, Flask | SQL: PostgreSQL, SQLAlchemy, Sequelize

Tools & Languages: Claude Code, Git, GitLab, Jira, Postman, JavaScript, SSMS, C#, Python, Figma

Environment: Federated micro-frontend, multi-tenant architecture

Client-Facing: Developer onboarding, SDK/API documentation, technical demos, executive briefin
